b7c [REDACTED]

II. NAMES AND ALIASES:

Subject's true name, if known, is to appear first and all aliases, including those found in the transcript of subject's identification record and those obtained through investigative inquiry, are to follow alphabetically with the exception of nicknames, which are to follow in alphabetical order after the other aliases. It is imperative that all names be correctly spelled. Names should not be listed as aliases unless there is a good basis to show that subject has used or has been known by such aliases.

JOHN WILLIAM ANGLIN

III. FBI NUMBER: **4745119**

IV. OFFENSE:

Include as the offense the character of the case or cases in which there is process outstanding for subject's arrest. **Escaped Federal Prisoner**

V. DESCRIPTION:

Birth date and place may be ascertained from interviews with immediate relatives, school records, or other reliable sources, and should not be taken merely from the memorandum furnished the field in fugitive cases. It must, if possible, be verified at the appropriate Bureau of Vital Statistics. In the event any discrepancies appear in data being assembled for the following items of description, an explanation should be given as to why preferences are afforded the particular items that were used:

Age - **32**

Date and place of birth (The manner in which verification was made should be indicated)

5/2/30, Georgia (Not verified. Atlanta requested to verify date of birth in Georgia.)

Height -	5'10"
Weight -	140 lbs.
Build -	Slender
Hair -	Blond
Eyes -	Blue
Complexion -	Medium
Race -	White
Nationality -	American
Education -	
Occupation(s) -	

Scars and marks - **left side of cheek (Z)**

Characteristics

Remarks (Include here any information of value in identifying the subject which does not properly come within the above categories.)

VI. PHOTOGRAPH:

Photograph(s) taken (is, ~~are~~) attached. When more than one photograph is available a copy of each should be included with a notation on the back thereof as to the date each was taken. A statement should be included as to the photographs which, according to witnesses are the best likeness of subject. Original photographs or negatives from which the original was made should be furnished if the same are obtainable, as in the process of reproduction a photograph loses some of its detail.

VII. Statement should be made at this point as to subject being armed and/or dangerous.
SUBJECT IS CONVICTED BANK ROBBER AND SHOULD BE CONSIDERED EXTREMELY DANGEROUS.

VIII. STATEMENT REGARDING FEDERAL PROCESS OUTSTANDING:

All outstanding process must be accurately described.

(NOTE: Draw line through words not applicable and fill in blanks.)

(A, an) (complaint, indictment, information) was (filed, returned) (before, by)

at _____ on _____ charging

_____ with a violation of Section _____
(name in which process is issued)

Title _____, United States Code in that (he, she) _____

IX. In the event a Check Circular is being requested, attach a page containing:

- (1) Description of method of operation used in cashing check and
- (2) Synopsis of activities which will include date operation began, extent of operation geographically, and place of most recent activities.

b7c

JOHN WILLIAM ANGELIN was convicted of bank robbery and sentenced to ten years on February 10, 1958, at Montgomery, Alabama. He was received on October 24, 1960, at Alcatraz from Leavenworth Prison, Kansas. He is single. Since he is a convicted bank robber, he should be considered extremely dangerous.

ANGELIN was found missing from the Federal Penitentiary at Alcatraz, San Francisco, California, the morning of June 12, 1962. A dummy was found in his cot and the cots of two fellow escapees, one of whom was his brother CLARENCE. He made good his escape by utilizing a homemade raft which he and his fellow escapees fashioned over a period of approximately one year.

Continuation of No. 5

FRANK LEE MORRIS, also known as Frank William Lyons, was convicted on a bank robbery charge and sentenced to fourteen years imprisonment which started on September 19, 1956, at New Orleans, Louisiana. He was received at Alcatraz on January 18, 1960, from the Federal Prison at Atlanta, Georgia. He is single and is of superior intelligence, having an I.Q. of 133. Since he is a convicted bank robber, he should be considered extremely dangerous.

MORRIS was found missing from the Federal Penitentiary at Alcatraz, San Francisco, California, the morning of June 12, 1962. A dummy was found in his cot and the cots of two fellow escapees. He made good his escape by utilizing a homemade raft which he and his fellow escapees fashioned over a period of approximately one year.

SPECIAL INVESTIGATION**VISION**

June 27, 1962

Background:

Names and pictures relating to the Alcatraz escapees were found in two packets fashioned from the raincoat material utilized in the life raft and Mae West jackets, and since their discovery in a whirlpool near Alcatraz, the names have been checked out without any trace of the escapees. The Anglin brothers and Morris, like the other escape-hazard convicts at Alcatraz, have previous histories of escape and attempted escape. Morris, on September 20, 1959, was found running back to his cell at the U.S. Penitentiary, Atlanta, at the time another inmate, escaped. Morris was not prosecuted for this attempt.

BY THREE INMATES HAS DISCLOSED THIS PRISON IN A DETERIORATED CONDITION AND MAY REQUIRE UP TO FIVE MILLION DOLLARS FOR ITS REHABILITATION.

SENATOR THOMAS KUCHEL ^{REPUBLICAN} /REP., CALIF./ IS QUOTED AS HAVING SAID IN WASHINGTON, D.C. THAT ALCATRAZ SHOULD BE TORN DOWN AND A GOOD MAXIMUM SECURITY PRISON BUILT ON THE MAINLAND. KUCHEL ALSO REPORTED AS HAVING SAID THE DELAPIDATED AND DETERIORATED CONDITION OF ALCATRAZ HELPED THREE PRISONERS TO ESCAPE. KUCHEL URGED SPEED UP OF ENGINEERING SURVEY APPROPRIATED LAST YEAR TO DETERMINE COST OF MAKING ALCATRAZ ESCAPEPROOF, SANITARY AND CLEAN AND ADDED IF COST IS TOO MUCH THEN ALCATRAZ SHOULD BE ABANDONED AS A FEDERAL PRISON.

CONGRESSMAN JOHN SHELLEY ^{DEMOCRAT} /DEM., CALIF./ IS QUOTED AS CALLING FOR TEARING DOWN OF ALCATRAZ AND SAYING THE SUCCESSFUL ESCAPE OF THREE PRISONERS, BECAUSE OF THE RUN DOWN CONDITION OF THE PRISON, DEMONSTRATES THE NEED FOR A NEW PENITENTIARY ELSEWHERE IN THE SAN FRANCISCO AREA.

INTENSIVE INVESTIGATION CONTINUING.

Re San Francisco letter to Director dated 6/22/62, which forwarded what was believed to be cement paint which had been dug out of holes in the cell of [REDACTED] an Alcatraz inmate, by prison officials.

[REDACTED] was assigned to cell [REDACTED] on September 10, 1961. He denied making the holes and claimed that they were probably made by an inmate formerly assigned to that cell.

It was ascertained from [REDACTED] U. S. Penitentiary, Alcatraz, on June 22, 1962, that the first time white cement paint, water mix, was ordered by that institution was on October 10, 1961, and it was not delivered until October 27, 1961. This was purchased through GSA and is listed as GSA article 8010-286-7721. This is the only type of cement paint that has been used inside of the cell block at the penitentiary. [REDACTED] advised that if you mixed a small amount of water with the white cement paint it would dry very quickly. Then the inmate who was camouflaging the hole would in all probability use some of the regular prison paint to go over the outside of the cement paint and this would camouflage the hole. [REDACTED] made available a sample of the white cement paint used by the institution as described above and it is being submitted in four plastic type containers.

There is being submitted a sample of the prison type paint utilized in painting the cells at the penitentiary.

The FBI Laboratory is requested to analyze the material believed to be cement paint which was submitted by referenced letter and ascertain if it is a similar cement type as to the enclosed known sample of cement paint. In addition, the Laboratory is requested to analyze the turquoise appearing paint which is being submitted and which is used by the penitentiary in painting inmates cells. The material dug from the hole of [REDACTED] had a

Honorable J. Edgar Hoover, Director
Federal Bureau of Investigation
U. S. Department of Justice
Department of Justice Building
Washington, D. C.

Dear Mr. Hoover:

I fully realize the Bureau has gotten all sorts of ideas and tips following the recent break at Alcatraz so I am somewhat reluctant to add more fuel to the stack, however I wanted to throw in an angle for what it might be worth.

It appears that the escape route at Alcatraz had been well cased and it must be assumed the three prisoners had rehearsed crawling through the vents to the roof in view of which they had closely determined how much time was required to reach the selected location where they could be picked up by a row boat or a similar float at a given time. This would call for prearranged detail plans with an outside source.

Naturally they would recognize the danger of trying to sneak such communication to outside contacts, therefore the safest and most logical method would be to verbally clear the entire project with a trusted prisoner scheduled for early release.

This man would then be in position to furnish the complete outline with first hand information to outside assistance. The matter of the exact date and time might work two ways, either firmly established at the time of his discharge or code language in a letter subsequently written to a regular correspondent. Naturally weather and local conditions would be given consideration. Perhaps the fact that the man was away at the time had some significance.

EXP. PROC.
JUN 25 1962

Honorable J. Edgar Hoover, Director -2-

June 21, 1962

I think it would be wise to learn the identity of prisoners released from Alcatraz during a given period and from that point trace possible contacts capable of engineering the escape assignment.

Records will reflect that well laid escape plans are usually successful regardless of obstacles involved. The [redacted] break from Atlanta is a good example of what can be accomplished with efficient outside assistance. b7C

b7C Sincerely [redacted]

*From Loc. Morrell
 John W. ...
 Clarence ...*

Captioned individual wrote 6-13-62, referring to the possible escape of three prisoners from Alcatraz. He indicates that when the prison was built the Director said he would grant full pardon to anyone who successfully escaped. Correspondent indicates he is refreshing the Director's memory.

Nothing was located in Bufiles to indicate that the Director made such a statement. This prison was actually built in 1909, and used as a military detention barracks until 1933, when it was turned over to the Department of Justice to be used as a Federal penitentiary. Obviously the Director would have no authority to grant a pardon and it appears he is being grossly misquoted.

Correspondent cannot be identified in Bufiles and his communication is sarcastic in nature.

RECOMMENDATION:

b7c [REDACTED]

That no acknowledgment be made.

 RE: ALCOS

The investigation of this matter due to the extreme national interest and the dangerousness of the Escapees is being handled as a special by the San Francisco Office.

There has been voluminous material in the form of teletypes, airtels, etc., from various offices. In some instances teletypes received, although not indicating the status, could well be considered complete and RUC. The same would hold true for airtels and letters.

To preclude double reporting of information and to insure that this matter is expeditiously investigated and reported, each office is to submit the results of the investigation conducted in the form of an insert to the San Francisco Office or by report.

In certain instances offices have indicated by teletype or airtel that the matter is RUC in their office; however, these offices are requested to review their files in this matter and to submit the results of their investigation in accordance with the above request. It is essential that all offices expeditiously report the results of their investigation in this matter so as to preclude any unnecessary investigation and to insure that all material is received by the San Francisco Office so that the investigation might be properly supervised. The cooperation of all offices is solicited.

SUBJECTS AT LARGE ARE ALL CONVICTED BANK ROBBERS AND SHOULD BE CONSIDERED EXTREMELY DANGEROUS.

23 June 62

Mr J. Edgar Hoover;
Justice Dept
Washington, D. C.

Dear Mr Hoover;

Since your picture is in all of the street-cars and some buses in Los Angeles I had to write to you sir after hearing a conversation on the street-co between two men on my way to work Friday.

Perhaps this bit of information could help your dept if it is true. You take a good picture Mr. H.

These men were so positive in their talk that the three men who escaped from Alcatraz (they say) are still living and ~~were~~ helped by a certain guard on the Rocks. According to their discussion the guard has them in hiding. Those plastic bags and raft were all placed in the water on purpose to throw the police off guard to let everyone think they are dead.

They could even be on the rocks until they get a safe departure. 65

They talked so interested as if they knew the angle and detail of the whole set-up. 9-1/2
Even mentioned the fact that those three 255

11 JUN 29 1962

CORRESPONDENCE

(2)

men had money hidden away at a certain place that could be reached by either the people who helped them or themselves.

The thing that made me write to you was that perhaps they talked in code between themselves on the street-car because twice during their conversation they mentioned one word brown eggs. What connection brown eggs had to do with those three men I can't figure out. Unless it was a city, town or state or hand grenades or some kind of ammunition which they referred to while talking. Or perhaps a pistol, gun or money of some kind. (These men got on at Vermont + 7th St The (S) car street-car in Los Angeles)

Mr Hoover I hope your Big Brother project is a success and you help many young fatherless boys. It is advertised on radio here in Los Angeles.

Should I win a money prize in the Tangle Town Contest that the Los Angeles Times Newspaper is running I will help your project with a nice check.

You are doing a great job for all of us in the U.S.

Sincerely yours, b7c

Los Angeles 5, Calif.

There were submitted to the Laboratory on the afternoon of 6/25/62, by the San Francisco Office, cement paint samples removed from holes located by prison officials in the cell of [REDACTED] an Alcatraz inmate. [REDACTED] had reportedly dug some 36 holes near the ventilator grill in his cell. He denies making these holes; however, prison records indicate no cement paint purchased for or used in his cell block prior to his cell assignment.

The cement paint has been submitted to the Laboratory to ascertain, if possible, the length of time since the material was applied.

By teletype dated 6/25/62, the San Francisco Office advised that known samples of cement paint and paint used at the prison are being forwarded for comparisons with material removed from [REDACTED] cell.

You will be kept advised of any pertinent developments.

TO :DIRECTOR, FBI (76-26295)

FROM :SAC, SAN FRANCISCO (76-2887)

SUBJECT :ALCOS

ATTN: IDENT DIVISION LATENT FINGERPRINT SECTION

Enclosed herewith are the following:

Seven lifts of latent impressions as marked. 7 photos (one each) of latents on window, one photo of latent on piggy bank. Three photos of latents on window sill, one section of window sill from kitchen window of residence #75, Alcatraz Island removed by Alcatraz carpenter

For your information during the night of June 11, 1962, FRANK LEE MORRIS, FBI Number 2158606, CLARENCE ANGLIN, FBI 4731702, and his brother JOHN WILLIAM ANGLIN, FBI 4745119, effected escape from their cells at Alcatraz Island, Federal Penitentiary, San Francisco, California, and allegedly made an effort to reach the mainland by raft. To date no evidence has been found to indicate that they made it to the mainland or that they may still be hiding on the island. However, all possible hideouts on the island have been searched with no trace of the escapees.

On 6/19/62, the home of [redacted] Alcatraz Island was entered in the family's absence between the hours of 11 a.m. and 1:00 p.m. through a partially opened rear kitchen window. The only thing found missing from the house was a quantity of small change from a glass piggy bank in one of the bedrooms, although some

67C

some of the change was left in the piggy bank which has a screw top. No food, clothing or other articles which would be considered useful to the escapees was noted missing by the Householders. This home borders on a large busy playground utilized by the children of employees living on Alcatraz. The backyard where the window is located is not visible from any other spot on the island. From the evidence available, entrance of the house was made through the window. The piggy bank is made in the shape of an animal of clear glass with a corrugated or lined surface simulating hair which prevents recognition and obtaining of good latents. The latents noticed on the window were streaked rather than clear impressions as though the hands had slid over the glass when manipulating the window. The best impressions were found on the outside edge of the wooden window sill where four dark colored finger impressions of possible value were noted. In view of the nature of the material transferred to the wooden sill these impressions were not dusted but a section of the window sill was removed and is being submitted herewith.

It is requested that the following examination be conducted:

Compare any legible latents with the fingerprints of FRANK LEE MORRIS, FBI # 2157606; CLARENCE ANGLIN FBI # 4731702; JOHN WILLIAM ANGLIN FBI # 4745119 in an effort to determine whether any of the latents can be said to be identical or not identical to either of these men.

Will also process the entire window sill, check and compare the latents on this section of window sill against those of the above named escapees to determine whether identical or not. The yellow painted surface is the top of the sill, the unpainted surface the bottom and the pink surface where the latents are now visible is the outside edge.

The above examination is requested in an effort to determine whether the escapees may still be on the island.

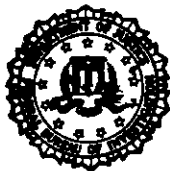

A thorough search both at the time of the escape and subsequent to the above incident has failed to locate any sign of their presence on the island.

SUBJECT: FRANK LEE MORRIS, aka. - FUGITIVE
 JOHN WILLIAM ANGLIN - FUGITIVE
 CLARENCE ANGLIN - FUGITIVE
 ESCAPED FEDERAL PRISONERS
 CONSPIRACY

SAC Price, San Francisco, telephonically advised another life preserver was found floating in the water 100 yards east of Alcatraz. It was found today at approximately 3:30 p.m., Eastern Daylight Savings Time.

The discovery of the jacket was made as a result of personnel stationed on Alcatraz in connection with their regular watch of the island, observing debris floating 100 yards east of the island. Warden Blackwell utilizing a Alcatraz boat recovered the jacket and immediately telephoned the San Francisco Office. According to SAC Price, the jacket is similar in every respect to the one left behind on Alcatraz by the subjects and the other which was washed up on the Pacific shore not far from the Golden Gate Bridge June 15, 1962. Examination of the jacket recovered from the San Francisco Bay today showed it had brown stains, possibly blood. The valve was open in a crimped condition, giving the appearance of having teeth marks. It is entirely possible that the escapee wearing this jacket attempted to prevent the air from escaping by squeezing this valve with his teeth.

SAC Price is transmitting the jacket for appropriate examination by our Laboratory.

FROM : SAC, SAN FRANCISCO (76-2887)

SUBJECT: ALCOS

398238

There are being forwarded, herewith, in eight packages, a considerable amount of evidence recovered in this case. Since it is apparent that a great deal of the material is evidence, it is requested that the examinations performed do not materially disturb the appearance.

Package Number 1 contains the following:

ITEMS

1. Raincoat of type used by inmates of Alcatraz Penitentiary furnished to SA [REDACTED] on 6/13/62, by OLIN G. BLACKWELL.

2. Life preserver recovered from top of the "B" Cell Block, Alcatraz, on 6/12/62, by [REDACTED] Alcatraz Prison Guard, and furnished to SA [REDACTED]

3. Life preserver located on Fort Cronkhite Beach, California, on 6/15/62, by [REDACTED] and given to SA [REDACTED] same date. b7d

4. Life preserver located in San Francisco Bay some fifty yards east of Alcatraz Island on 6/22/62, by [REDACTED] and turned over to SA [REDACTED] same date.

5. Partially completed pontoon recovered on 6/12/62, from top of "B" Cell Block by SAs [redacted] and [redacted]

6. Packet containing personal items identifiable with the ANGLIN brothers recovered from San Francisco Bay on

20. Three hack saw blades found on 6/13/62, by SA [REDACTED] b7c
[REDACTED] under cell bed of Subject [REDACTED]

21. Approximately eight inch long piece of scrap iron found under cell bed of Subject [REDACTED] by SA [REDACTED] on 6/13/62.

22. Spoon handles and tape found on 6/12/62, by [REDACTED] Alcatraz Officer, in the cell of Subject [REDACTED]

23. Electric cord and two pieces of steel about seven inches long found in hardened cement paint in bucket on roof of "B" Cell Block on 6/13/62, by SA [REDACTED]

24. Electric cord found in hardened cement paint in bucket on roof of "B" Cell Block on 6/13/62, by SA [REDACTED]

Package Number 2 contains the following:

ITEM NUMBER

10. Dummy face found 6/12/62, by SA [REDACTED]
[REDACTED] in cell of Subject FRANK LEE MORRIS.

Package Number 3 contains the following:

ITEM NUMBER

11. Dummy face found 6/13/62, by SA [REDACTED]
in cell of Subject JOHN WILLIAM ANGLIN. (It is noted that this face was cracked because the guard, upon receiving no answer from the cell, reached between the bars and yanked the blanket off of the bed, and the face tumbled to floor).

Package Number 4 contains the following:

ITEM NUMBER

12. Dummy face found 6/13/62, in cell of Subject

SF 76-2887

CLARENCE ANGLIN by SA [REDACTED] (It is noted that this dummy face was also somewhat cracked, having been received in that manner).

Package Number 5 contains the following:

ITEMS

13. Dummy face found 6/12/62. in cell of Subject [REDACTED] by SA [REDACTED]

26. "Rem-Weld" liquid plastic, electric drill made from barber's clippers, mirror, plumber's tape and miscellaneous tools located on top of "B" Cell Block on 6/12/62, by [REDACTED] Guard, Alcatraz, and turned over to SA [REDACTED]

Package Number 6 contains the following:

ITEM NUMBER

25. Homemade cardboard periscope in two pieces, found on 6/12/62, by [REDACTED] Guard, Alcatraz, on top of "B" Cell Block and turned over to SA [REDACTED]

Package Number 7 contains the following:

ITEM NUMBER

27. Plywood paddle picked up in San Francisco Bay, by U. S. Coast Guard boat on 6/12/62, and turned over to SA [REDACTED] same date.

Also, paddle found on top of "B" Cell Block, Alcatraz, on 6/12/62, by [REDACTED] Alcatraz Guard, and turned over to SA [REDACTED]

SF 76-2887

b7c

Package Number 8 contains the following:

ITEM NUMBER

b7c

28. Cardboard grill found by SA [REDACTED] in cell of Subject CLARENCE ANGLIN on 6/13/62.

Laboratory examination is requested.

1. Check type of material used in making the life preservers, items 2, 3 and 4, the pontoon, item 5 and the packet, item number 6, to see if identical with the material in item 1.

2. Check life preservers, items 3 and 4, to ascertain if any apparent blood stains on the items. If same located, ascertain blood type if possible.

3. Check to see if "Rem-Weld" liquid plastic contained in item 26 was used in making the above life preservers, pontoon and packet.

4. There are submitted three magazines under items 7, 8 and 9, evidently utilized by Subjects in making the life preservers and pontoon. Comments are solicited as to how it appeared they followed the instructions in these articles.

5. Check the hack saw type blades in items 14, 16 and 20 and furnish their approximate age, description and manufacturer if possible.

6. Check flesh colored paint in item 18 to see if this was paint used in tinting dummy faces, items 10, 11, 12 and 13.

7. Check paddles submitted under item 27 to note if they were made from similar material. Also, the paint on the paddle, part of the one recovered from San Francisco Bay, should be checked to see if it is identical to the paint used in the cell block. A sample of this paint was previously submitted in this matter.

SF 76-2887

172

8. Will check the composition of the dummy faces, items 10, 11, 12 and 13, and report same if possible without detracting from their use as evidence.

9. Check handwriting of Subjects FRANK LEE MORRIS, JOHN WILLIAM ANGLIN and CLARENCE ANGLIN against handwriting contained on notes, papers and photographs which were in the packet. (item 6). Additional handwriting specimens of these Subjects are being forwarded by separate communication.

The other tools and miscellaneous items are being forwarded for a general examination and observation. Any comments concerning these would be appreciated. The evidence submitted herewith appears the most pertinent material which was recovered during the search.

When the examinations are completed, it is requested that this evidence be returned to the San Francisco office.

This material is being transmitted in eight separate packages as indicated, by registered mail.

SUBJECTS AT LARGE AND ARE ALL CONVICTED BANK ROBBERS AND SHOULD BE CONSIDERED EXTREMELY DANGEROUS.

MAIL ROOM ☐ TELETYPE UNIT ☐

(4) (continued on next page)

Results of examination:

The life preservers, the partially completed pontoon, the Q7 packet and the K3 raincoat are all composed of the same type of material, mainly rubber-coated cotton fabric. The adhesive used on these items is a rubber adhesive different from the Hen-Weld Glue of specimen Q22.

The life preservers are all the yoke type, that is with a hole for the head, placing flotation behind the head as well as in front of the body.

Specimen K4 (Popular Mechanics, March 1962) contains an article discussing various types of life preservers. The article includes pictures of a man wearing a yoke type preserver similar in shape to Q3 through Q5, with the caption "Yoke-type vest holds swimmer high and upright; keeps unconscious man riding high, face out of water." The article states, however, that the yoke type preserver makes swimming difficult.

Specimen K5 (Sports Illustrated, March 21, 1962) is discussing various inflatables, life preservers, toys, et cetera, states that "The composition of most inflatables.....is either vinyl plastic or rubberized fabric. Rubberized fabric is durable and more difficult to puncture than vinyl."

Specimen K6 (Popular Mechanics, November 1960) contains an article on making decoys out of inner tubes by a vulcanizing process. Neither the material nor the process was used in constructing Q3 through Q7.

The life preservers were tested for their ability to retain air. They were inflated until firm, and then weights were placed on them. It was necessary first to seal three punctures in Q5. Specimen Q3 appeared to be completely airtight, remaining firm for several hours. Specimens Q4 and Q5 lost most of their air in about an hour. However, the rate of deflation was slow, and pressure could no doubt be maintained by mouth.

The hair on the dummy faces was verified as being of human origin.

The dummy faces were examined for the presence of bristles similar to those composing the K7 brush, but none were found.

Specimen Q18 has a base of concrete composed of Portland cement and sand. Over the concrete is a layer of white cement paint similar to the K2 white cement paint.

Specimen Q19 is basically a mixture of Portland cement, sand grains and white cement paint with a layer of white cement paint over the mixture.

Specimen Q21 is similar to Q19 in that it is basically a mixture of Portland cement and white cement paint over which is white cement paint.

Specimen Q20 is formed from soap packed over a small bundle of white cotton rags.

Although the tan or flesh-colored paint on the dummy faces was basically similar to the K7 paint, differences were noted. It appears that paint like K7 could have been used on the dummy faces; however, prior to use other paint ingredients were added to it. For example the paint on Q20 and Q21 contained barium not found in the K7 paint, and the paint on Q18 and Q19 contained more lead than the K7 paint. Paint ingredients, pigments or extenders containing barium or lead could have been added to K7 and then the mixture could have been applied to the dummy faces.

The two paddles, Q24 and Q25, are similar in design and construction and are composed of similar materials.

The blue-green paint used on the cells, specimen K1 (FBI Laboratory report dated July 3) was similar in color and composition to the blue-green paint on Q24 and Q25.

The walls or sides of the periscope, Q23, and the backing on Q26 was composed of a material similar to an artist panel which is a white cotton canvas over a stiff cardboard backing. This panellike material present in the periscope, Q23, bears the trade name "Blue Boy" and "18" X 24". The adhesive on the inside of the periscope is similar to Rem-Weld liquid plastic adhesive as found in specimen Q22.

All of the submitted saw blades in specimens Q6, Q10 and Q13 appear to be homemade. The following information was compiled concerning the saw blades:

<u>SPECIMEN</u>	<u>LENGTH</u>	<u>WIDTH</u>	<u>THICKNESS</u>	<u>APPROXIMATE NUMBER OF TEETH PER INCH</u>
Q9	6 1/8"	1 1/16"	0.013"	14

<u>SPECIMEN</u>	<u>LENGTH</u>	<u>WIDTH</u>	<u>THICKNESS</u>	<u>APPROXIMATE NUMBER OF TEETH PER INCH</u>
Q10-B	6 2/4"	11/16"	0.014"	11 on one edge 15 on one edge
Q10-C	6"	1/2"	0.021"	fine, fragmentary cutting surfaces on both edges
Q12-A	6"	11/16"	0.014"	14
Q12-B	6 1/8"	11/16"	0.014"	14
Q12-C	6 12/16"	11/16"	0.014"	14

There are not any saw teeth cut into the following thin strips of steel:

<u>SPECIMEN</u>	<u>LENGTH</u>	<u>WIDTH</u>	<u>THICKNESS</u>
Q10-A	6 1/8"	11/16"	0.014"
Q11	6 3/16"	1/2"	0.021"
Q11	6 2/16"	1/2"	0.021"
Q11	6 2/16"	11/16"	0.015"

It appears probable that the four pieces of steel listed in the last table represent materials from which the homemade saws were made.

In dimensions and appearance the 11/16" wide steel strips are similar to metal from a large spring. Steel banding strap material for use in preparing boxes for shipment is usually softer than the saw blade metal but it looks strikingly similar to it. The prison officials probably can determine the most logical source of the saw blade metal including the 1/2" wide metal.

It is not possible to estimate the age of the saw blades on the basis of the amount of rust on them.

Specimen Q9 consists of the round knurled handle and 1 5/8" of the filing portion of a small, broken file. The information "2 SIMONDS" appears on the handle of the old file which identifies it as a product of the Simonds Saw and Steel Company, Fitchburg, Massachusetts, a large volume manufacturer of saws and files.

In addition to the three thin pieces of steel in Q11 which appeared similar to the steel from which the saw blades were made, there were numerous pieces of miscellaneous metal, homemade tools, tablespoon handles, a small wooden block with three set screws and a homemade flashlight.

The wooden block could be used as a chuck on an electric drill.

The flashlight demonstrates the ingenuity of the prisoners in utilizing available material to accomplish their purpose. The housing for the two penlight batteries (one battery is a spare) is a small rectangular plastic bag which has a hole in one end through which the bulb is screwed so that the base of the bulb contacts the center post of the battery. A fastener, similar to an Ace type file fastener, is employed as the means of carrying the electricity from the battery base to the side of the bulb and it also acts as the switch. There is no lens or other protection for the bulb.

No pertinent information was developed from examining the electric motor, Q12, the steel scraping or digging tool, Q14, the electric cords of Q16 and Q17 and the two pieces of steel in Q18.

Specimen Q15 consists of three tablespoon handles, a homemade steel tool with a paper tape handle and some black fabric tape stored around part of a small Singer Sewing Machine book containing some writing. No significant information was developed concerning the tablespoon handles or the small tool.

No blood was identified on specimens Q4 and Q5.

K 3 Raincoat

Constructed of rubber-coated cotton fabric: o. o. color.

Q3, Q4 & Q5 Made of same material as K3.
Each preserver ca. 18" x 30". Yoke type

heavy cloth strap
for tying around waist.

seams glued

Tube in Q3 & Q4 is white plastic, struts to tube in Windex proper. Tube in Q5 is length of covering from wire.

Q3 has spring paperclip to prevent escape of air.

Q3, Q4 & Q5 were tested for airtightness. All were inflated til firm (strengthened 3 holes in Q5), & weights (several books) were placed on them. Q3

apparently lost no air. Q4 & Q5 lost most air in about 1 hr. Rate of deflation slow & could be maintained by mouth.

cf of Q3-Q5 & mag. articles.

H4: Popular Mechanics March 1962

"Your Life Preserver" p. 135

Discusses various types of life preservers.

Shows picture of man in yoke-type
preserver & caption "Yoke-type vest
holds swimmer high and upright;

keeps unconscious man riding high,
face out of water. [Shape of preserver in
picture is similar to Q3-Q5]. Further

additional comments re yoke-type vest:

"..... yoke vest worked best on an
"unconscious" swimmer. The collar on the
yoke vest helped turn him upright, no
matter how he hit the water. ... Made
swimming difficult."

H5: Sports Illustrated March 21, 1962

P. W1 - "The composition of most

inflatables ... is either vinyl
plastic or rubberized fabric.

Rubberized fabric is durable and

more difficult to puncture - than vinyl."

also present on same page is a picture of a yoke-type life jacket generally similar in shape to Q3-Q5.

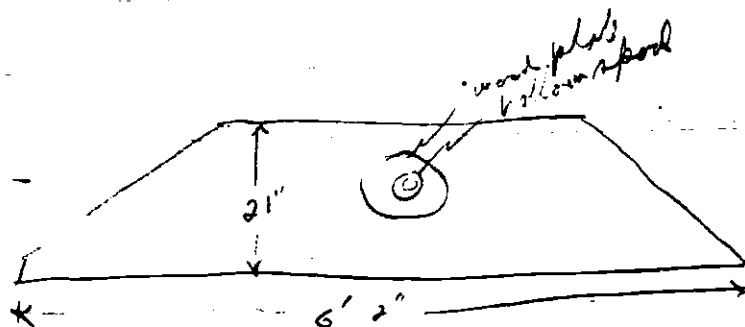

K6 Popular Mechanics, Nov. 1960

P. 154. "Rubber Geese"

Discusses making of decoys & inner tube rubber, vulcanizing seams & raw rubber. Q3-Q5 made of diff. material & seams glued. It does not appear that info in this article was used in making Q3-Q5.

Q7 Packed also made of same material as K3 raincoat

Q6 Pailton also made of same material as K3

ends not sealed

Q 25

Blade composed of 1 layer of $\frac{3}{16}$ " plywood & 1 layer of $\frac{1}{4}$ " plywood. (hardwood-birch) (unpainted)

Q 24

Blades composed of ~~one~~ 2 layers of $\frac{3}{16}$ " plywood (same as in Q 25 except inside of 1 layer is painted).

2 paddles same design, constructed in similar manner
None of 4 pcs of plywood fit together (i.e. can't show were from same pc)

126c

The adhesive used on the item is a
rubber adhesive different from the Rem Udd glue
of Q22

Dictation

The life preservers, the
partially completed pontoon, the
Q7 packet and the K3 raincoat
are all composed of the same
type of material, namely
rubber-coated cotton fabric.

The life preservers are
the yoke type, that is with a
hole for the head, placing
flotation behind the head
as well as in front of the body.

Specimen K4 (Popular Mechanics,
March 1962) ^{contains} ~~contains~~ an article
discussing various types of life
preservers. The article includes
pictures of a man wearing a
yoke-type preserver, similar in
shape to Q3-Q5, with the
caption "Yoke-type vest holds
swimmer high and upright; keeps
unconscious man rising high,
face out of water." The article

states, however, that the yoke-type preserver makes swimming difficult.

Specimen K5 (Sports Illustrated, March 21, 1962) in discussing various inflatables, life preservers, toys, etc., states that "The composition of most inflatables..... is either vinyl plastic or rubberized fabric. Rubberized fabric is durable and more difficult to puncture than vinyl."

Specimen K6 (Popular Mechanics, November 1960) contains an article on making decoys out of inner tubes by a vulcanizing process. Neither the material nor the process was used in constructing Q3-Q7.

The life preservers were tested for their ability to retain air. They were inflated until firm, and then weights were placed on them. It was necessary first to seal these punctures as.

specimen Q3 appeared to be completely airtight, remaining firm for several hours. Specimens Q4 and Q5 lost most of their air in about an hour. However, the rate of deflation was slow, and pressure could no doubt be maintained by mouth.

The hair on the dummy faces was verified as being of human origin.

The dummy faces were examined for the presence of bristles similar to those composing the K7 brush, but none were found.

The two paddles, Q24 and Q25, are similar in design and construction and are composed of similar materials.

PC-7054

76-26295EXAMINATION OF SAW BLADES

All of the submitted saw blades in specimens Q8, Q10 and Q13 appear to be homemade. The following information was compiled concerning the saw blades:

SPECIMEN	LENGTH	WIDTH	THICKNESS	APPROXIMATE NUMBER OF TEETH PER INCH
Q8	6 $\frac{1}{8}$ "	$\frac{1}{16}$ "	0.013"	14 11 ON ONE EDGE
Q10-B	5 $\frac{3}{4}$ "	$\frac{1}{16}$ "	0.014	18 ON ONE EDGE
Q10-C	6"	$\frac{1}{2}$ "	0.021	FINE, FRAGMENTARY CUTTING SURFACES ON BOTH EDGES
Q13-A	6"	$\frac{1}{16}$ "	0.014"	14
Q13-B	6 $\frac{1}{8}$ "	$\frac{1}{16}$ "	0.014"	14
Q13-C	5 $\frac{13}{16}$ "	$\frac{1}{16}$ "	0.014"	14

There are not any saw teeth cut into the following thin strips of steel:

SPECIMEN	LENGTH	WIDTH	THICKNESS
Q10-A	6 $\frac{1}{8}$ "	$\frac{1}{16}$ "	0.014"
Q11	6 $\frac{3}{16}$ "	$\frac{1}{2}$ "	0.021"
Q11	6 $\frac{3}{16}$ "	$\frac{1}{2}$ "	0.021"
Q11	6 $\frac{3}{16}$ "	$\frac{1}{16}$ "	0.015"

It appears probable that the four pieces of steel listed in the last table represent materials from which the homemade saws were made.

It is not possible to estimate the age of the saw blades on the basis of the amount of rust on them.

In dimensions and appearance the $11/16$ " wide steel strips are similar to metal from a large spring. Steel banding strap material for use in preparing boxes for shipment is usually softer than the saw blade metal but it looks strikingly similar to it. The prison officials probably can determine the most logical source of the saw blade metal including the $1/2$ " wide metal.

→ TP

EXAMINATION OF FILE FOUND IN MORRIS' CELL

Specimen Q9 consists of the round knurled handle and $15/8$ " of the filing portion of a small, broken file. The information "2 SIMONDS" appears on the handle of the old file which identifies it as a product of the Simonds Saw and Steel Company, Fitchburg, Massachusetts, a large volume manufacturer of saws and files.

EXAMINATION OF MATERIAL FOUND IN BUCKET ON ROOF OF "B" CELL

In addition to the three thin pieces of steel in Q11 which appeared similar to the steel from which the saw blades were made there were numerous pieces, miscellaneous metal, homemade tools, tablespoon handle, a small wooden block with three set screws and a homemade flashlight.

The wooden block could be used as a chuck on an electric drill.

The flashlight demonstrates the ingenuity of the prisoners in utilizing available material to accomplish their purpose. The housing for the two penlight batteries (one battery in a spare) is a small rectangular plastic box which has a hole in one end through which the bulb is screwed so that the base of the bulb contacts the center post of the battery. A fastener, similar to an Acco^{type} fastener, is employed as the means of carrying the electricity from the battery base to the side of the bulb and it also acts as the switch. There is no lens or other protection for the bulb.

EXAMINATION OF SPECIMENS Q12, Q14 - Q17

No pertinent information was developed from examining the electric motor, Q12, the steel scraping or digging tool, Q14, the electric cords of Q16 and Q17 and the two pieces of steel in Q16.

Specimen Q15 consists of three tablespoon handles, a homemade steel tool with a paper tape handle and some black fabric tape stored around part of a small Singer sewing machine book containing some writing. No significant information was developed concerning the tablespoon handles or the small tool.

- K7 Flash-colored paint and paint brush from John William Anglin's cell (Your 18)

PAGE 2
PC-70654 GH

Q17:

An old round, jacketed type electric cord without any connections on either end. Cord is very dirty from having been in the cement paint bucket. The outside jacket is checked from deterioration. Both ends of cord appear at one time to have been attached to a connection the wires on each end protrude beyond the jacket & the insulation on the individual (2) stranded wires has been stripped back the usual amount, about $\frac{3}{4}$ ".

Cord OD (over jacket) = $\frac{7}{8}$ "

Length - estimated to be perhaps 6'-12'

Jacket color - black

- (3) Stranded conductors - 1 white, 1 black, 1 gr.
Bunch stranded, left lay - 26 strands #30 ga.
 \therefore Cord is #16 AWG

Green conductor cut off flush with jack so apparently it had been used as a 2-conductor electrical cord.

No pertinent info developed concerning Q17.

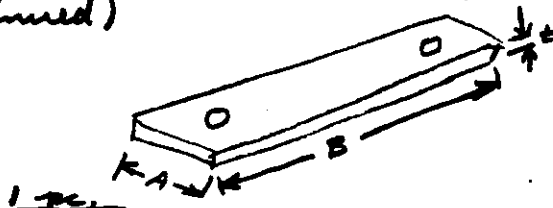

Q16: Consists of relatively long piece of black electric twin conductor jacketed cord & 2 pcs. of steel.

Wire has shiny brown plastic insulation jacket about $\frac{7}{32}$ " OD. One white insulated stranded conductor & 1 black insulated stranded conductor under jacket. 41 strands (bunch stranded) per conductor. Each strand about .006" dia = #18 AWG.

No pertinent info concerning this cord in Q16

Specimen covered with dustlike residue from cement paint bucket.

Q16: (Continued)

Similar
to pc
in Q11

1 pc.
A = $1\frac{1}{4}"$
B = $10\frac{7}{8}"$
t = $\frac{1}{4}"$
 $\frac{7}{16}"$ dia. holes

Strongly magnetic steel,
easily sawed, covered
with paint bucket residue,
may have been used as
paint bucket paddle

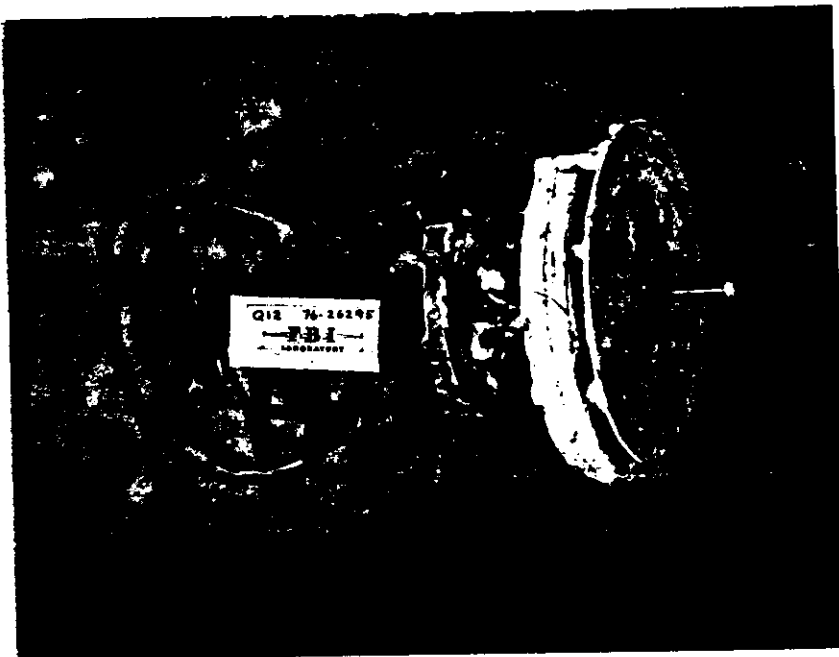

2nd pc.

A = $1\frac{1}{2}"$
B = $10\frac{1}{16}"$
t = $\frac{1}{4}"$
2 - holes each about
 $1\frac{7}{32}"$ in dia.
same other connec
or

No pertinent info developed concerning either
piece of steel.

Q12:

Q12:

Appears to be a light weight motor, perhaps a vacuum sweeper mtr. Lead wires from mtr. spliced to a piece of wire similar to the brown jacketed Q16 twin-conductor cord. No drill chuck on threaded end of motor shaft, see my photograph. Mtr. shaft $5/16"$ diameter & protrudes $15/16"$.

Q11:

strongly magnetic pc. of steel encrusted with a white cement paint latched residue. Piece of steel is $10\frac{7}{8}"$, $1/4"$ thick, $1\frac{1}{4}"$ wide. Holes $7/16"$ thick. Similar in dimensions to pc. in Q16

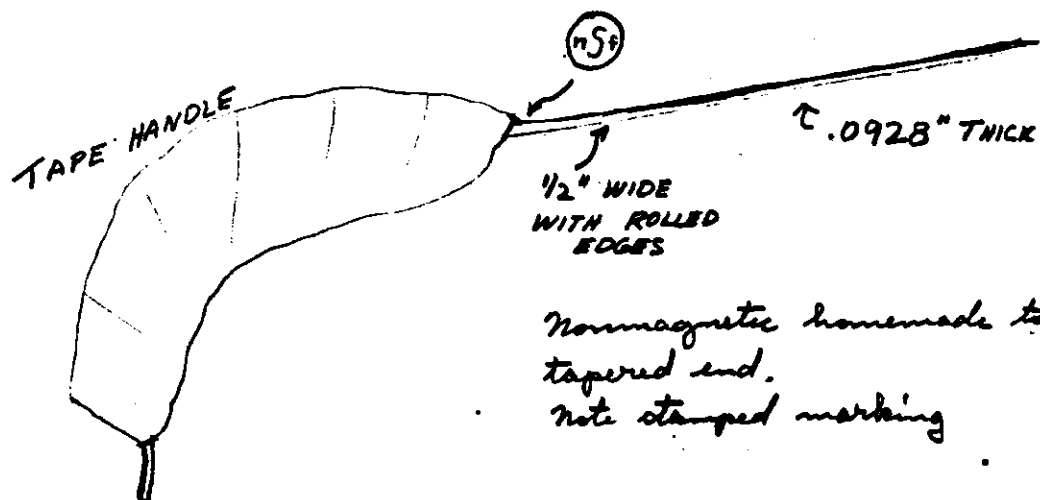

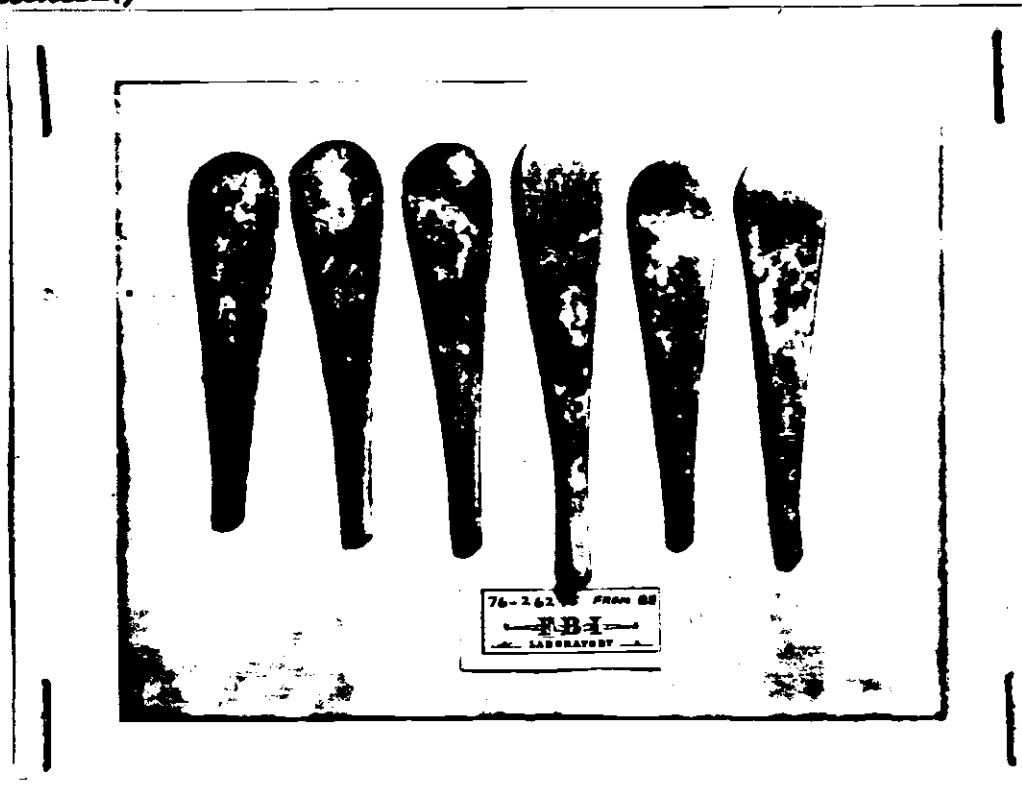

An old appearing "EAGLE" brand 250V, 660W rubber covered electric light screw socket with 2 pigtails coming out of it. Similar to those often used for test lights to determine if a line is "hot" and for out-of-door applications.

* 2- pcs. of what appear to be pcs. of blued steel/spring steel about $6\frac{5}{16}"$ long x $1/2"$ x $.021"$ thick.

* 1- pc. of what appears to be blued spring steel $6\frac{2}{16}"$ long x $2\frac{2}{32}"$ wide x $.015"$ thick.

6- tablespoon handles with the small end shaped like either a screwdriver or a point. On the back side of some of the spoon handles by the small end, appear the letters "U.S." Polaroid photo of spoons on next page.

Q11 (Continued):

1 toggle switch marked on 1 side "BT40A" by manufacturer and "on" and "off" on other side.

Q11:

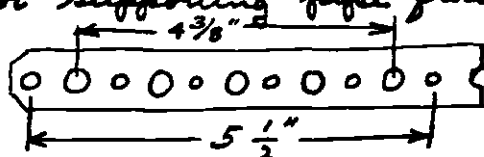

$\frac{3}{8}$ " bolt (16 tds/in) 4" long with square nut, both bolt & nut steel. Threaded entire bolt length, screw head (slotted) on bolt. 2" long pipe sleeve or spacer on bolt.

1 - lead expansion plug 1" long x $\frac{1}{2}$ " O.D. with a $\frac{9}{32}$ " dia opening in it. On the rim edge or end of plug appears " $\frac{1}{4}$ " and "STD." and "A-S".

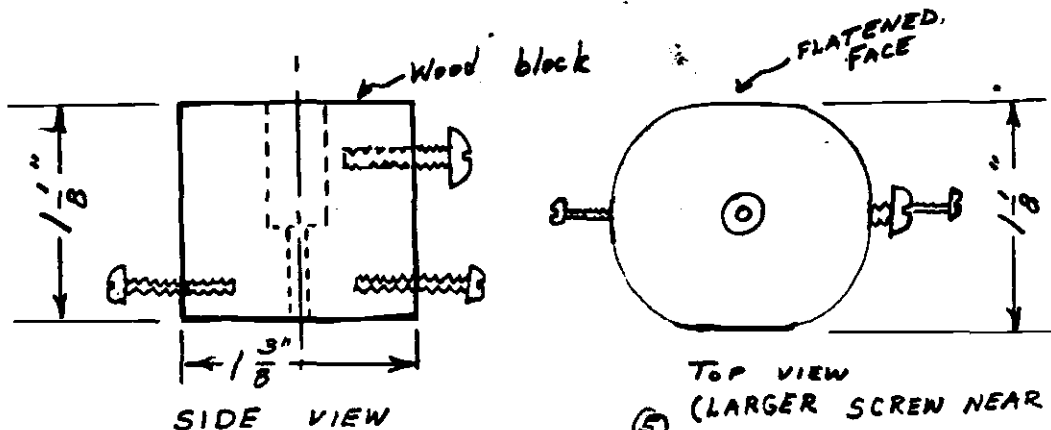

1 setting tool for driving lead expansion plugs into place.

1 hexagon-hd. steel bolt about $\frac{19}{32}$ " in dia, hex nut, nearly $1\frac{7}{8}$ " tds on shank, bolt length measures under hd $2\frac{1}{2}$ ", hd thickness about $\frac{5}{8}$ ", 11 tds/inch.

1 pc. of steel $6\frac{1}{4}$ " long which has a series of alternating evenly spaced holes running its entire length - holes about $\frac{1}{4}$ " & $\frac{3}{16}$ " respectively. Strap $\frac{3}{4}$ " wide x .036" thick (approx.). Appears to be a strap for supporting pipes from a ceiling or a floor joist.

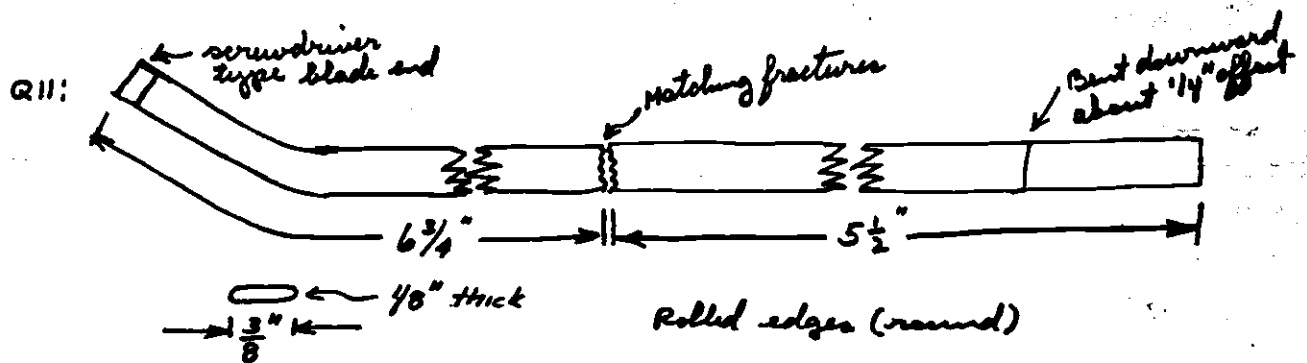

Between $\frac{1}{2}$ " and $\frac{9}{16}$ " distance between centers of each hole.

Shape suggests wood may be a pc. of a tool handle such as an axe (small) or sledge etc.

pc. appears to be a hewn chunk.

Approximately 1" from fracture on underside of left-hand segment appears: **VOLLRATH STAINLESS STEEL**

Metal very slightly magnetic.

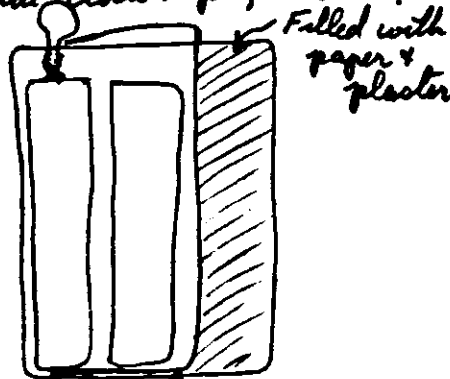

Thomas' Register lists The Vollrath Co., Sheboygan, Wisconsin, as making stainless steel ware for homes and institutions and also make marine hardware and marine accessories.

Q11:

7-5-62

Homemade flashlight — see photo page 7. Clear plastic case except for side which is open in photo & it is a pc of black plastic which is attached to the flashlight box with wide cloth tape, black.

1 penlight battery used at a time.

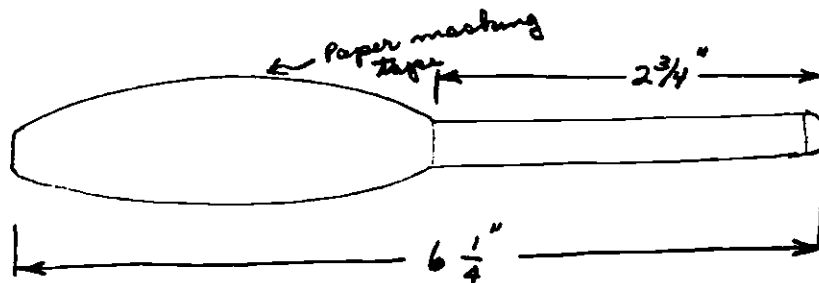

RAY-O-VAC battery in use. Most of identification on outside of spare battery torn off but enough remain to identify it as a Mallory.

Acco file binder type of clip for switch

7-6-62

Q15:

3 tablespoon handles similar to the 5 in Q11. The back side of the longest handle near the reduced end is marked YAL U.S.

Magnetic steel bar $\frac{1}{8}$ " thick, $\frac{3}{8}$ " wide, square sides. End tapered & lower end of exposed steel bar is somewhat rusty. Metal has a plated appearance. Strongly magnetic.

Upper part of a green paper cover singer machine notebook containing 3 pages containing in blue ink Spanish - English word

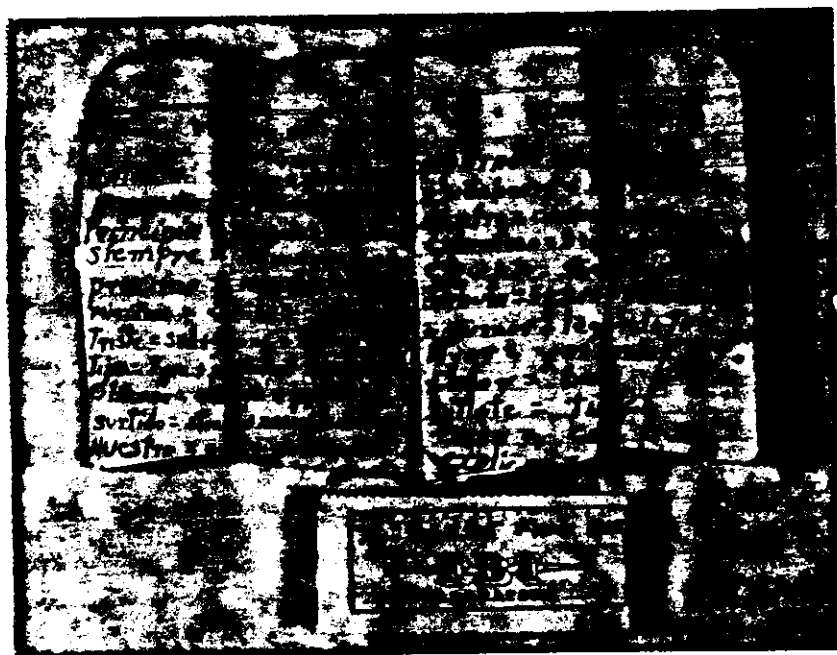

⑦

316

Q15:

equivalents. On inside of back cover are the upper parts of a 1953 calendar and the first part of a 1954 calendar. First available page for writing is Thursday 7 (no year shown) + last page for writing is Saturday 30. No name in book.

This portion of a notebook pad folded up and used as a core to wrap black cloth tape around (may be book mending tape).

I labeled the inside of the front cover for identification
1 pc of tape $1\frac{9}{16}$ " wide at widest place + other
pc is about $\frac{1}{2}$ " wide.
